Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1894 Excerpt: .The latter rock is cut through by a railroad tunnel just west of the North Adams depot, where the limestone forms part of the eastern side of the Greylock synclinorium, really underlying the Berkshire schist, but here inverted by a sharp, overturned fold. The summit of Clarksburg mountain is composed of a mass of granitoid xgneiss (Stamford gneiss) identical in petrographic characters with that of the Hoosac tunnel (Stamford granite). This is overlain by the Clarksburg quartzite (Vermont formation) on the west and south sides, and by quartzites and gneisses on the east side, the contacts having been found. In this quartzite Mr. Walcott has found the remains of trilobites, making it Lower Cambrian, and we shall now endeavor to show that this is represented by the gneiss found on the east side of the mountain. Near the old signal station on Clarksburg mountain the quartzite...
