

# Modules over Endomorphism Rings Encyclopedia of Mathematics and its Applications

By Theodore G. Faticoni

Cambridge University Press. Hardcover. Book Condition: New. Hardcover. 392 pages. Dimensions: 9.2in. x 6.1in. x 1.0in. This is an extensive synthesis of recent work in the study of endomorphism rings and their modules, bringing together direct sum decompositions of modules, the class number of an algebraic number field, point set topological spaces, and classical noncommutative localization. The main idea behind the book is to study modules  $G$  over a ring  $R$  via their endomorphism ring  $\text{End}R(G)$ . The author discusses a wealth of results that classify  $G$  and  $\text{End}R(G)$  via numerous properties, and in particular results from point set topology are used to provide a complete characterization of the direct sum decomposition properties of  $G$ . For graduate students this is a useful introduction, while the more experienced mathematician will discover that the book contains results that are not otherwise available. Each chapter contains a list of exercises and problems for future research, which provide a springboard for students entering modern professional mathematics. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Hardcover.
